# AGE YOUR WOOD

The R&D laboratory in CHIMIVER PANSERI S.p.A. has developed a new and innovative range of reacting solutions for ageing your wood:

## OLD WEST

The use of OLD WEST allows to obtain a large variety of effects imitating the old weathered woods. OLD WEST is different from classical stains or dyes which are coloring the wood hiding its grain structure; OLD WEST enhances the natural beauty of wood standing out color differences into the wood grain. The OLD WEST reacting solutions are clear and pigments free; the natural wood color is changed through the reaction of the solution with the tannin or resins contained in the wood.

Consider that the final results can change based on:

- ✓ Quantity of product
- ✓ Dilution
- ✓ Reacting solution overlap
- ✓ Working conditions
- ✓ Drying conditions in between the coats
- ✓ Wood calibration and preparation
- ✓ Application method
- ✓ Tannin and resin content
- ✓ Country of origin of the wood
- ✓ Chemical nature (water or solvent based) of the fixing primer
- ✓ NEVER mix together the products
- ✓ Leave always drying well the products
- ✓ After complete drying, all products can be overcoated each other
- ✓ All products can be added or diluted with water
- ✓ Convertitori West and Attivatori West can be diluted as desired in order to obtain endless effects.

P.S.: If what above written is not fully respected, the final look and quality can be different. As long as you respect all conditions and parameters written on relative technical datasheet.

## OLD WEST RANGE

### **ATTIVATORE WEST MOSS:**

to be applied directly on wood, it reacts with tannin and result is a GREY/GREENISH coloration.

### **ATTIVATORE WEST PLUS:**

to be applied directly on wood, it reacts with tannin and result is a GREY/BLUE coloration.

### **ATTIVATORE WEST BLACK:**

to be applied directly on wood, it reacts with tannin and result is a BLACK coloration.

### **ATTIVATORE WEST BARRIQUE:**

to be applied directly on wood, it reacts with tannin and result is a REDDISH/PINK coloration.

### **\*CONVERTITORE WEST 6:**

special solution to be applied after one coat of ATTIVATORE in order to obtain a GREY or GREY-GREEN effect.

From 5 to 15% of Anticante West B/C can be added to increase aged wood effect. The product must be diluted with at least two parts of water.

### **\*CONVERTITORE WEST 7:**

special solution to be applied after one coat of ATTIVATORE in order to obtain a BROWN effect.

From 5 to 15% of Anticante West B/C can be added to increase aged wood effect. The product must be diluted with at least two parts of water.

### **ANTICANTE WEST B:**

special greining powder. It has to be diluted in water for enhancing the whitish ageing effect.

### **ANTICANTE WEST C:**

special whitening powder. It has to be diluted in water for enhancing the whitish ageing effect.

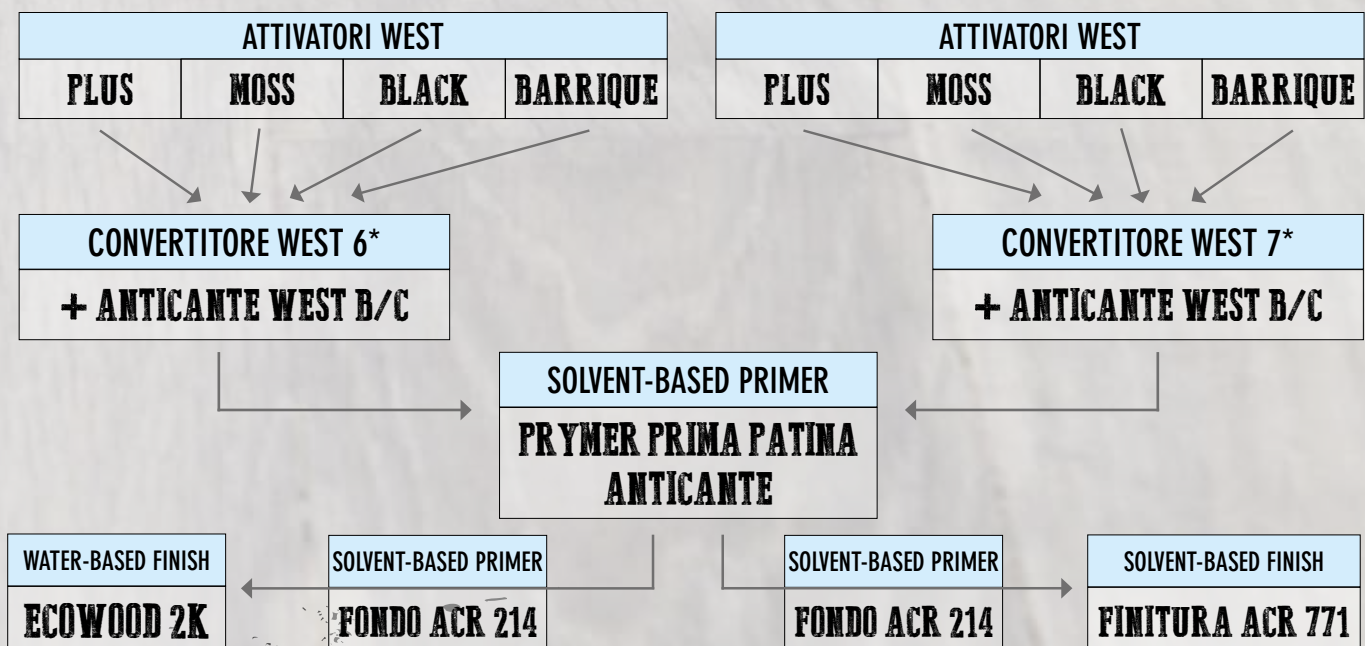

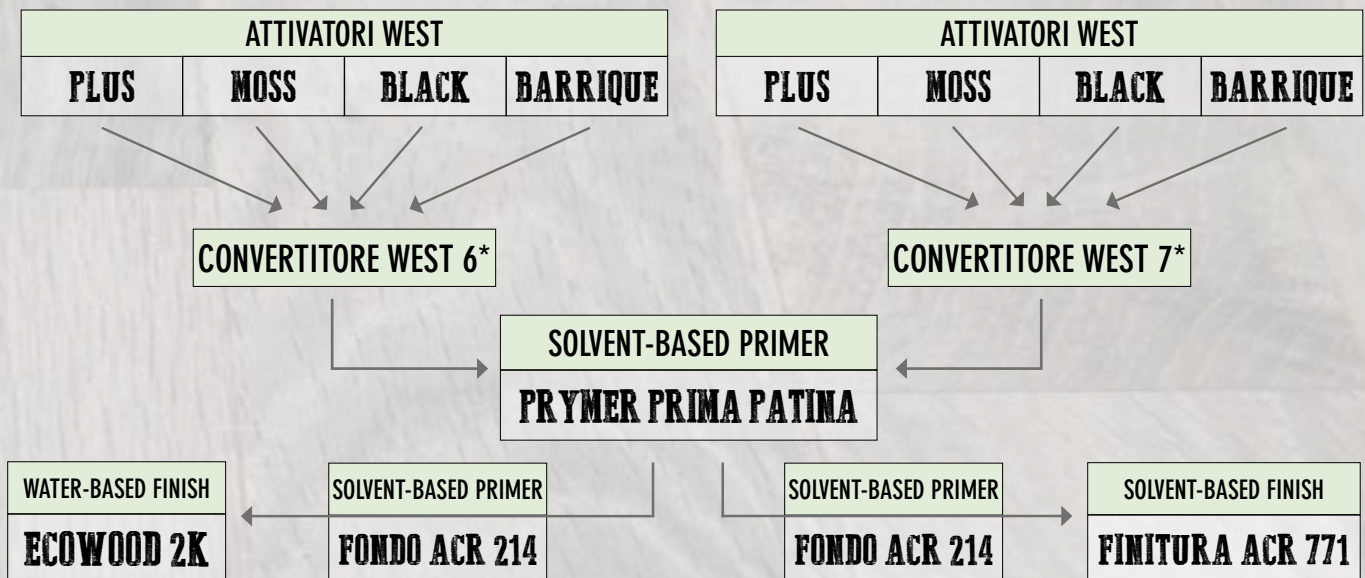

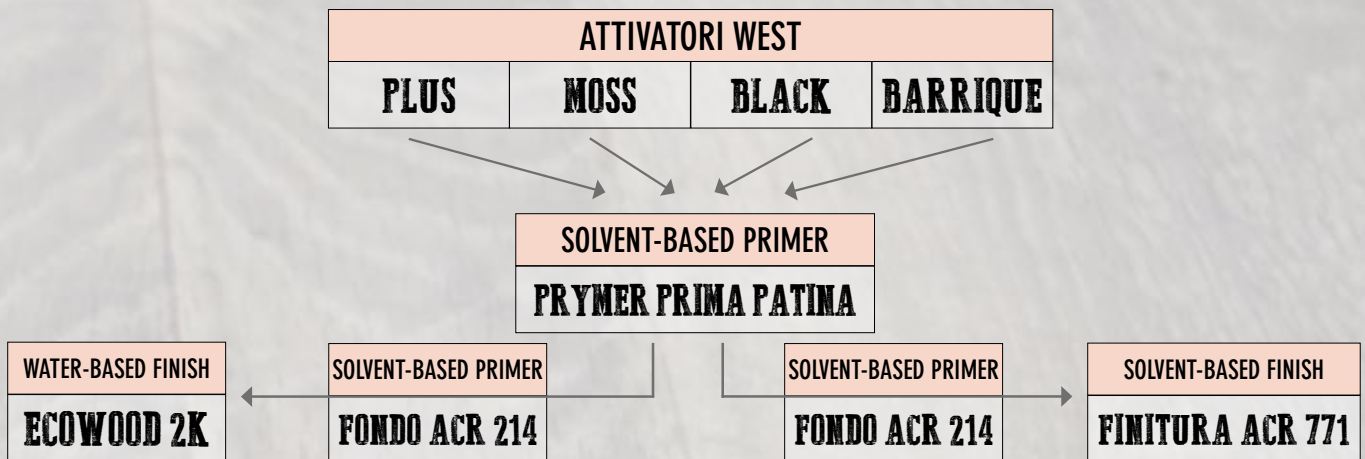

### **PRYMER PRIMA PATINA:**

single-component solvent-based insulating primer for stabilizing the color.

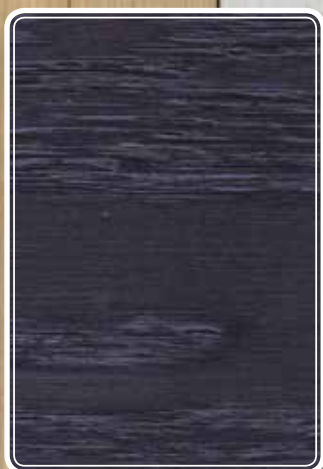

### **PRYMER PRIMA PATINA ANTICANTE:**

single-component solvent-based insulating primer for enhancing the ageing worn look.

# OLD WEST CYCLES

Create the wood own  
tailormade aged wooden floor!
